

INSTRUCTIONS

- Virtual destination is an app that will enable you to perform a dream destination type effect, free of choice, and also a forced variation. With a bit of imagination you can create something unique. The app already comes preloaded with lists for hotels, cars, flights for force mode and also the regular mode. We know you want to jump straight in, so let's get started with the basics.

PERFORM

- Here is a very brief operational guide to get you started. From the main page tap Perform. When you do this the image below will show up.

The image is a screenshot of a mobile application interface. At the top, there is a header bar with the 'AZ' logo on the left, the URL 'www.wholesale.com' in the center, and a refresh icon on the right. Below the header, there are four icons with labels: 'Flights' (with an airplane icon), 'Hotel' (with a bed icon), 'Hotel+ Flights' (with both airplane and bed icons), and 'Car' (with a car icon). The background of the app is a cityscape featuring the Empire State Building. Below the navigation icons, the text 'Search Flights' is displayed in a bold font. Underneath, there are two input fields: 'Flying from' with the placeholder text 'From Destination' and 'Flying to' with the placeholder text 'To Destination'. At the bottom, there are two date selection buttons labeled 'Start Date' and 'End Date', with the dates '2021-04-22' and '2021-04-25' respectively.

This is the main home page to perform the effect. So you can ask your spectator to choose either a flights only, hotel only, car only or holiday package option which is

the flights + hotel section. After they input the information and click search, depending on which option they choose, further pages will come up after they click search.

So if they choose flights only for example, a list of pre loaded images of some of the major airline companies will show up. See image below

So this is how you perform the flight only mode. The exact same is performed for hotel only, car only, and flight + hotel mode.

When they click on hotel only, they put in the same information Being the departing city, destination city, number of adults, children, room etc and click search. After the click search a pre loaded list of hotels with images will appear. See image below

HOW TO GET BACK TO THE MAIN MENU

- After performing the effect using the regular mode, in the top right corner you will see an image of a refresh logo. See image below

If you double tap this logo, it will return you to the main homescreen of the app.

The screenshot shows the top of the holidaysrus.com website. At the top is a browser address bar with the URL 'www.holidaysrus.com' and a refresh icon on the right. Below the address bar is a navigation bar with icons and labels for 'Flights' (green), 'Hotel', 'Flights+', and 'Car'. A large blue square button with a white arrow pointing up and to the right is overlaid on the right side of the navigation bar. Below the navigation bar is a large image of a city skyline (New York City). Below the image is a 'Search flights' section with the following fields:

Search flights

Flying from

Flying to

Departing

Returning

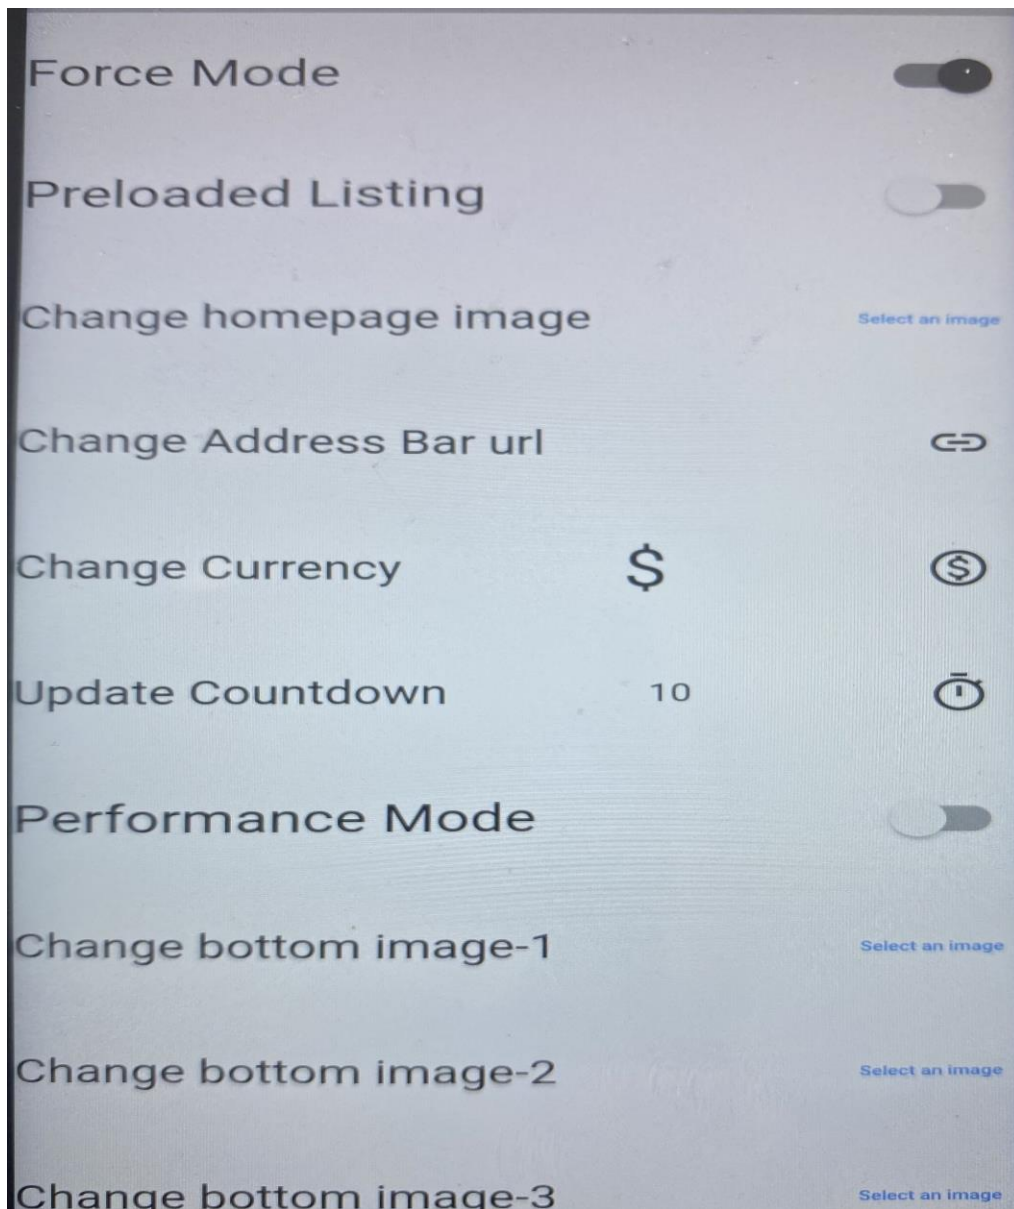

Adults

Children

At the bottom of the page, there is a black bar with the word 'SEARCH' in white capital letters.

HOW TO USE FORCE MODE

- To use force mode, click the settings button in the top right corner from the main homescreen of the app. And toggle on force mode. See image below.

After toggling on the force mode, go back to the homescreen. From here click customise, and then click force mode button and you will see the force mode in put menu. From here you will enter the force items. The first box is the departure city, then destination city, then the hotel you want to force, the car you want to force and finally which airline you want to force. See image below

After inputting all force items, click submit to save these

London (UK)

Glasgow

Best Western Hotels

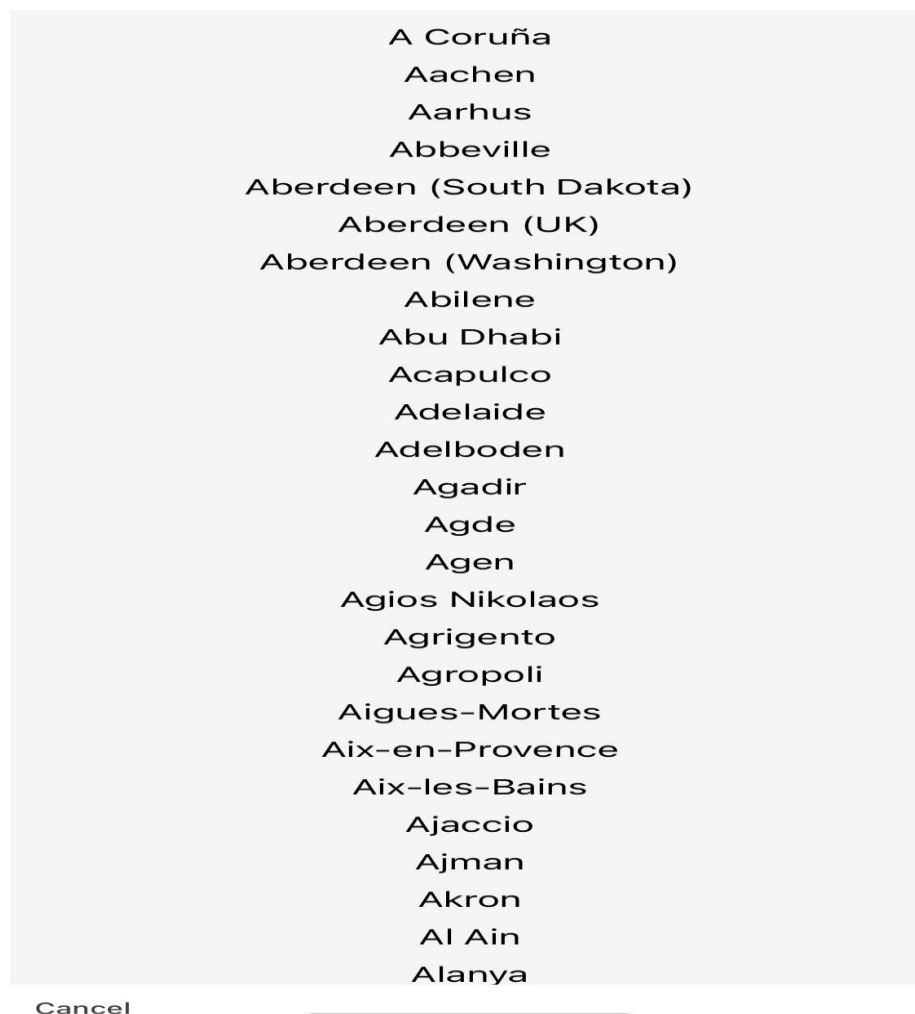

Ford Focus

Aer Lingus Airlines

SUBMIT

From here you click perform from the homescreen. And you will be brought back to the main page where you perform the effect. So now that you have all force items already saved. You ask the spectator to choose either flights only, hotel, car or holiday package.

For this example let's say they choose holiday package. Once on this page, you will notice you cannot type in the cities like regular mode, but when the boxes on the page are clicked, a drop down menu of city's, hotels and cars will appear, that are already preloaded into the app will appear. So as the spectator scrolls up or down on the page, whichever city they pick for the departing city, your force city will come up. This is the same for destination city, hotel, and car. Wherever they click and hold on the screen, your force items will come up. See image below. (image might look slightly different in different devices)

Now of course the spectator can't see this as if the force city is dublin, and they choose another city , they will know it's not what they chose. So how you will perform force mode is, after you hand them your phone in force mode, you will ask them to choose their options, but you want to make it completely random, so when they click the departing city you show them a list of options will come up, you then ask them to turn the phone away from them to the side, or to the floor or to hold against their chest, and start swiping the menu, whenever they want to stop, you ask them to press on the screen, and when they look back at the screen, they will see the force city in the box, of course they will not know this. You then repeat this for the destination city, hotel and car. After they do this, they click search and a confirmation page will show. See image below.

The layout and effect is exactly the same, if performed just using the other modes.

PRE LOADED LISTINGS

- So with this option, this is only used in the regular mode, NOT force mode. In regular mode, we have pre loaded some hotels, airlines and cars into the app. You will find these under the flights tab, hotels tab and cars tab. So we have preloaded these for each user so they can use the app straight away. However I also realise some of these airlines, hotels, cars are not used in every country around the world. So you can choose to hide these options if you prefer. To do this just go to settings, and toggle off where it says pre loaded listing. Now if Search in the on the flights, hotels, flights + hotels or cars in regular mode, these listings will not show.

CHANGE HOMESCREEN IMAGE

- On the main pages of where you perform the effect, you will see an image of New York skyline as a basic image. This image can be changed to whatever image you want. To change this, go to settings from the main Home Screen, click on change Home Screen image, click the picture, and upload any image from your camera roll, click add to save this image. This will now appear on the main page when you perform the effect.

CHANGE ADDRESS BAR URL

- When you are performing the effect, you will notice the search bar at the top. This can be changed to put in whatever you want, so in essence you can have a fake website put in here, and whatever is put in will show in the address bar when performing.

To change this, click on change address bar url which is located in the settings tab of the main homescreen, type in whichever fake url you want, click add to save. Whatever you have saved here will now appear in the address bar at the top when performing.

CHANGE CURRENCY

- When performing in regular mode, and performing any mode, when you input the information and are taken to the next page to choose your flights, hotel or cars etc, you will see there is a currency symbol next to the total cost of the flight, hotel, car etc. You can change the currency with this option.

Go to settings, and click change currency, here enter the currency symbol you wish to use, click add to save. Now this currency symbol will appear next to the prices.

UPDATE COUNTDOWN

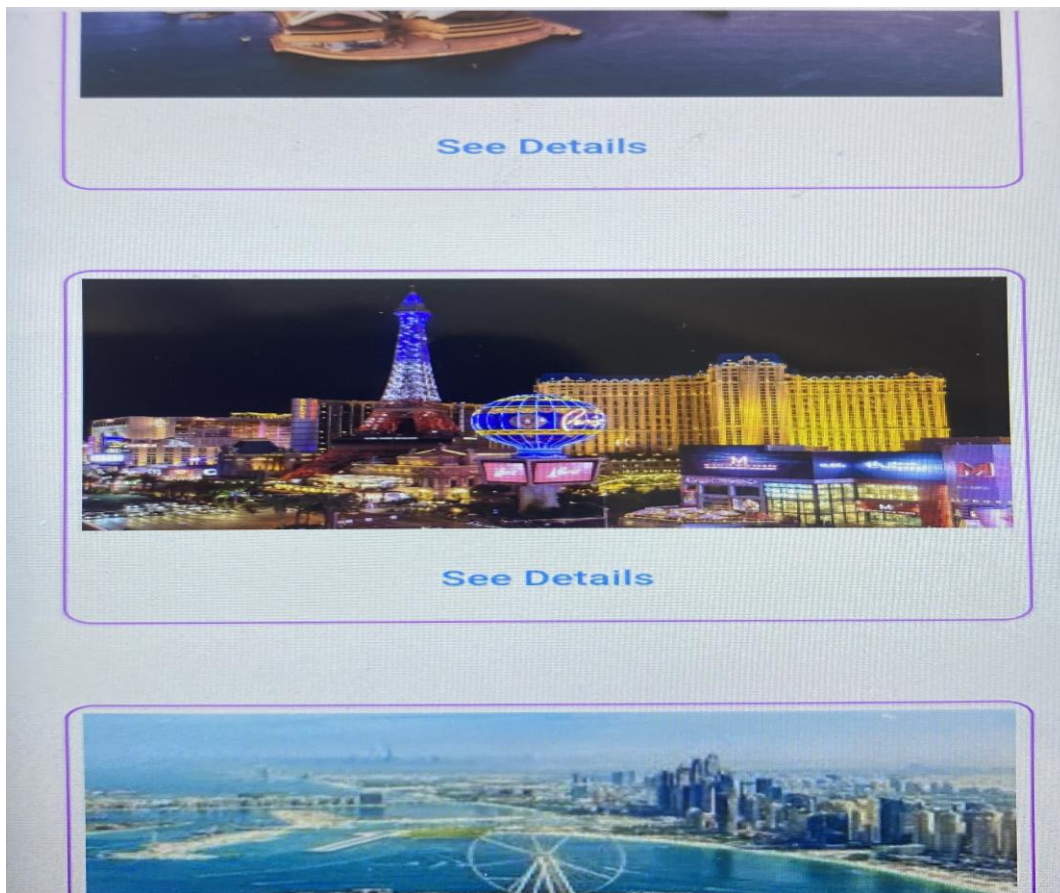

- This is a custom count down timer for notifications. So after the notifications are triggered and the phone is locked, the number you put in, for example 10, after the phone is locked, 10 seconds later the notifications will pop up on the lockscreen

PERFORMANCE MODE

- In the settings when you toggle on performance mode, and then close the app, when you open it back up it will bring you to the fake travel main page. This way you can perform the effect hands off by handing the phone to your spectator so when they click the app, it takes them straight to the performance mode.

CHANGE BOTTOM IMAGE 1,2,3

- On the main performance screen you will see 3 images at the bottom. See image below.

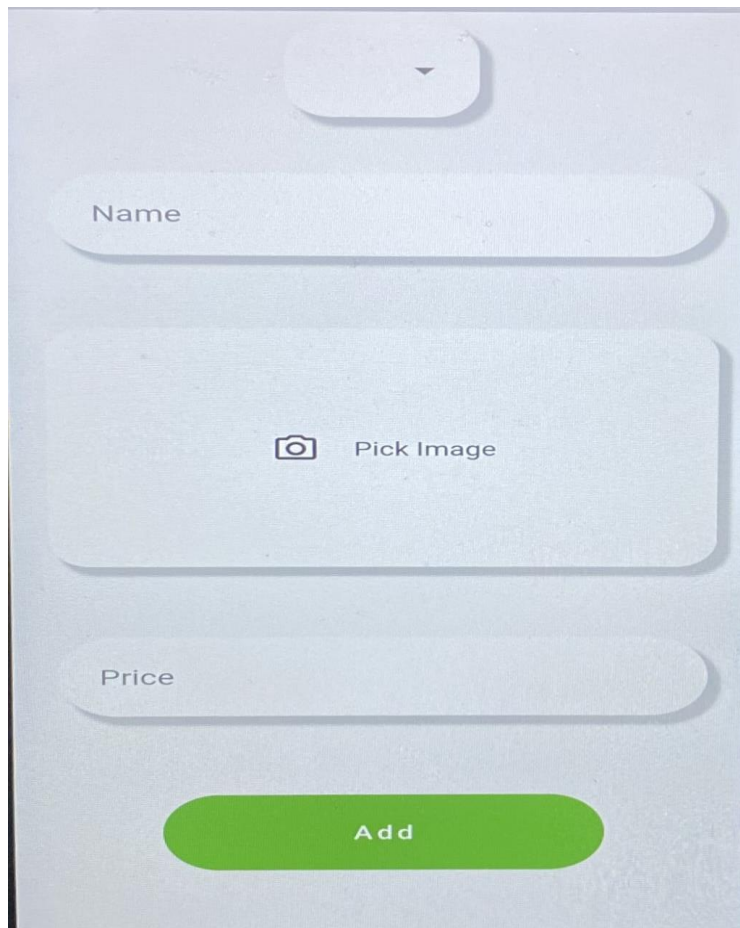

To change these images go to settings and you will see at the bottom where it says change bottom image1, change bottom image 2, change bottom image 3. Click the image on the right beside the text and upload any image from your phones camera roll and now these will appear on the main performance screens at the bottom.

CUSTOMIZE OPTIONS

- Virtual destination is full customisable so you can add your own flight, hotel and car listings images in the regular mode. To do this first go to google images, and save a picture to your camera roll of either a hotel image, flight image logo or car.

For this example we will use an airline but the options are exactly the same for cars and hotels.

So you will go to customize, click create listing and the image below will come up.

The image shows a mobile application interface for creating a listing. It features a light blue background with rounded rectangular input fields. At the top, there is a 'Name' field. Below it is a 'Pick Image' button, which includes a camera icon and the text 'Pick Image'. Underneath that is a 'Price' field. At the bottom of the form is a prominent green button with the word 'Add' in white text.

From here you will select the type of listing to appear, so in our case it's flights, so click the box and select Airlines. Type in the next box the name of the flight company, ie, Hawaiian Airlines, click the button under where it says choose photo, and upload the image on your camera roll of the American Airlines logo you saved from Google images, and lastly put in whatever price you want the flight to be. Click add to save. Now this listing will be saved so when you perform the flights mode of the Regular mode, See image below.

Airline ▼

Hawaiian Airlines

HAWAIIAN
AIRLINES

699

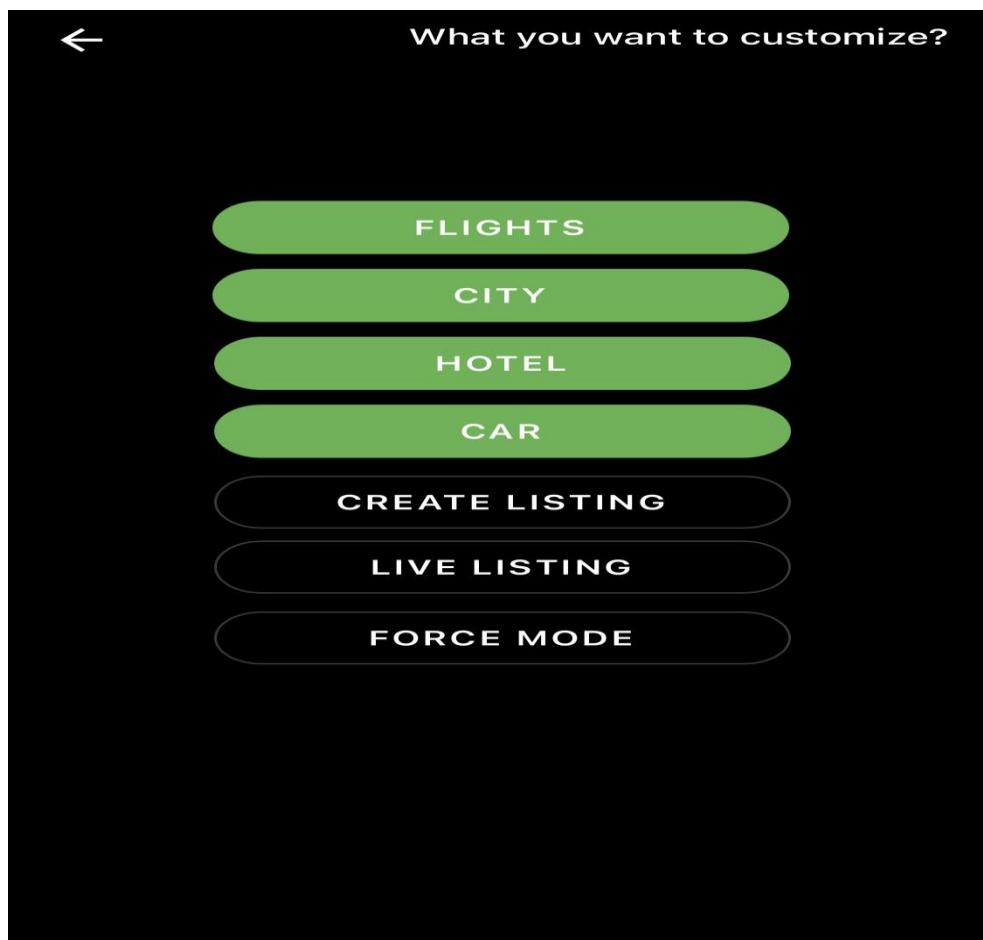

Add

You would simply repeat this process to add a particulate hotel, or car. Just make sure if add in a hotel image for example, for it to show under the hotel listings, the hotel option has to be chosen, same If you choose a car option. It would show under car.

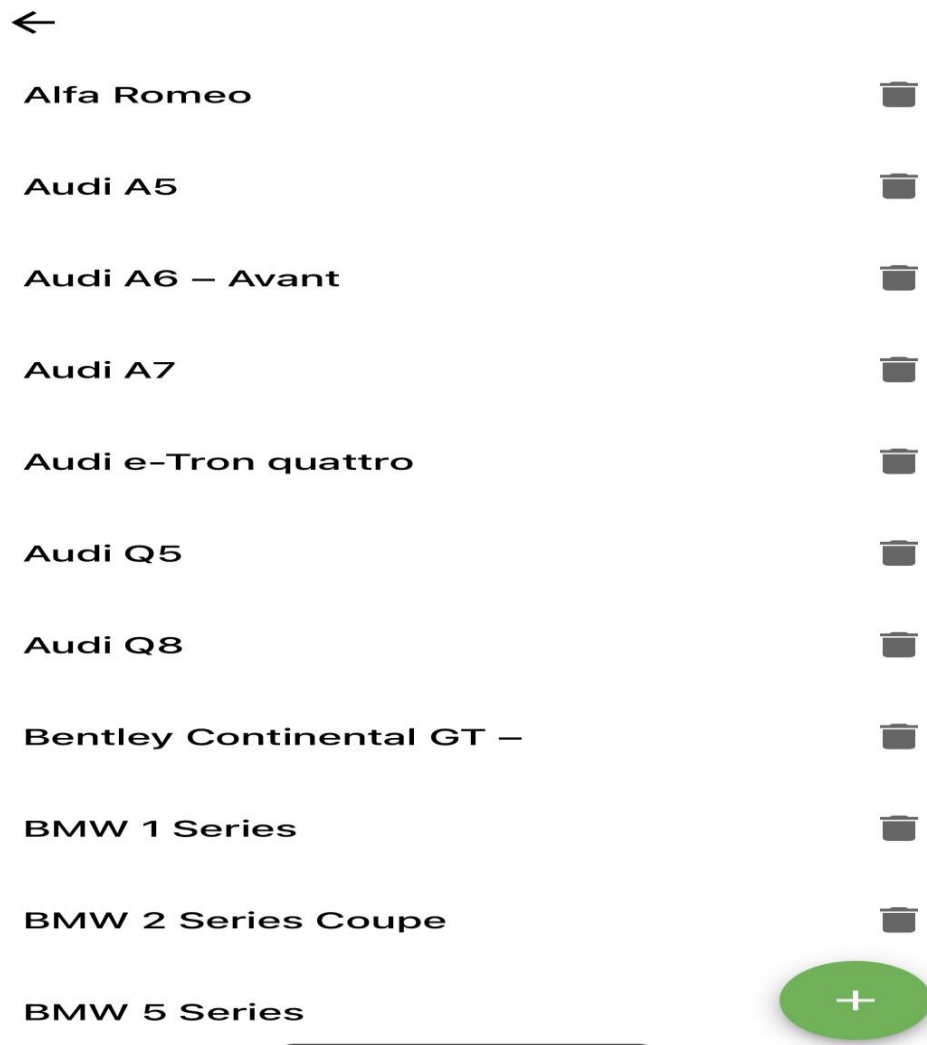

HOW TO CUSTOMISE FORCE MODE

- When using force mode, we have preloaded hotels, airlines, cars and city's into the app so you can perform right away. However you could imagine how long it would take to import every single car, city, hotel and airline in the world. So if you find a participate city, car, airline or hotel is not listed, you can simply add it yourself.

To do this go to customise, and you will see a list of buttons like the image below.

For this example we will add a car. So from the customise menu, click car and you should see the image below.

If you click the green button in the bottom right corner a box will come up. Type the name of the car into this box, click add to save. Now this car will appear in the force list of cars in the app. To add city's, airlines and hotels,

you just repeat the same process. To delete any city's, hotels, cars or airlines just click the bin logo next to the name of the item.

The cities, cars, hotels that are inputted in this, will appear in the list of force mode options ONLY. But they will also appear in the regular mode, when being typed in, they will appear in the boxes. See image below.

LIVE LISTING

- Under the customise options you will see an option titled live listing. Whenever you add a hotel image, flight image or car image, as explained in the pre loaded listing section, they will appear under live listings, as these are the listings that are currently live that are created by the user. To delete a listing just like the bin logo beside the listing.

BONUS ROUTINE REVIEWS

- Thanks to my good friend and fellow Magician mark cullen for this great idea. You will notice on the confirmation pages of flights, hotel, flight + hotel and cars, there is a review at the bottom.

This review looks like a real review but it's actually a paragraph containing hidden words to which you can ask the spectator to look at the review, choose a word and you can read their mind. In each review we have included 5 long words. The crib for this is C.L.E.A.R

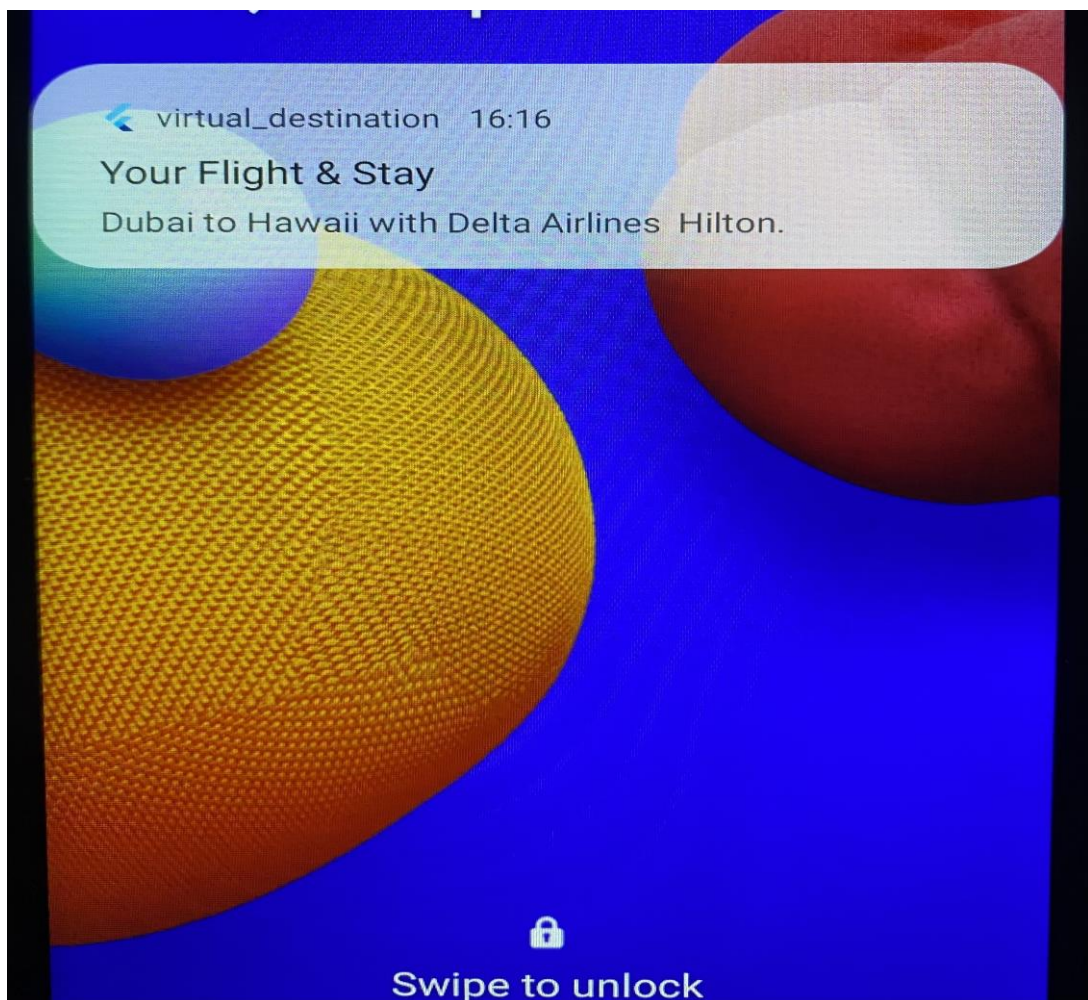

Comfortable
Location
Exceptional
Accommodation
Refreshments

So if you choose to add this routine to the regular or force mode option you simply ask the spectator to have a look at the review, and to think of a word, but not make it too easy to tell them to pick a long word, and from there you would ask them if the first letter is an E, or and R etc and from then you would know which word it is.

If you have ever used any anagram before in other mentalist effects this will be very easy.

PEEKING THE INFORMATION (NOTIFICATIONS)

- After the spectator has inputted the information and they are taken to the confirmation page. In the bottom right corner there is a checkout button. This button has to be clicked by them in order to trigger the notifications. So when this button is clicked, you instruct the spectator to now lock the phone and hand it back to you. After the phone is locked, the custom timer will be activated. So if you put the number 10 in, 10 seconds after the phone is locked, the notification of whatever they searched for will appear. See image below

ADDITIONAL THOUGHTS

- With some imagination you can make up some simple but powerful routines. With force mode which can obviously be performed over zoom, you can send your spectator a text message or email before the show, and at the end of your show predict what they have chosen for their dream holiday.

If you're doing corporate events or trade shows, you can force the name of the airline for example if you were doing an event for American Airlines.

The fact the app is so customisable the possibilities are endless.

Also head over to the Private Facebook page and interact with other users of the app and thanks for supporting the app.

Enjoy
Brian
